

ESKİŞEHİR OSMANGAZI UNIVERSITY
Graduate School of Natural and Applied Sciences

HORTICULTURE DEPARTMENT PhD PROGRAM EDUCATIONAL OBJECTIVES

- Carrying out research and development activities by planning to solve existing problems encountered in the process of growing Horticulture products, which are an important part of agricultural production, and to improve product quality and yield, and then developing, conducting, auditing, and analysing the data obtained and disseminating it to stakeholders,
- Because of the theoretical and practical knowledge, skills, competence, basic values, and professional qualifications earned by graduates during their graduate education, they are preferred by both the public and commercial sectors,
- Establishing multidisciplinary contacts outside of their field of expertise to gain the ability to cooperate and communicate,
- Following agricultural production and research processes in a changing global climate and evolving agricultural technology, being open to development, inquisitive, entrepreneurial, possessing contemporary values, believing in teamwork, and being able to prepare,
- To educate agricultural engineers with PhD degrees who prioritize ethical values in their professional lives, are concerned about environmental and social issues, and are actively involved in problem-solving activities.
